

AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows:

Add a new paragraph between original Paragraphs [0041] and [0042] within the figure descriptions as follows:

Fig. 18 is a perspective view of an alternative embodiment of a child seat with an armrest according to the present invention.

Amend Paragraph [0054] in the original specification as follows:

[0054] While the preferred embodiment shown in Fig. 2 is directed to protrusions located on a pivoting and flexible tab, the present invention includes other acceptable alternatives, such as a push button or latch mechanism. Furthermore, although the earlier described drawings show the armrest 250 to be inserted into the base 200, the present invention includes an alternative arrangement in which the armrest 250 slides over the upwardly-extending portion 240 of the base 200, as shown in Fig. 18. In such an arrangement, the flexible tab 255 and protrusions 260 would be positioned on the upwardly extending portion 240 of the base 200, and the holes 242 would be located on the arm rest 250.
